

Introduction to Programming with Java

Class: [RectangleArea.java](#)

Score: ★ (Simple)

Prerequisites: ACM Task Force Commands

Description:

Write a program that takes **height** and **width** of the rectangle from the user then calculate and print the area of that rectangle. (Note that **height** and **width** variables should be declared as **double**)

Sample Run:

```
This program computes the area of a rectangle.  
Enter the height of rectangle: 4  
Enter the width of rectangle: 5  
Rectangle Area = 20.0
```
