

Char Stats

In this program, ask user for a string and then count uppercase, lowercase and non-alphabetic characters in it. The program should continue until the user enters an empty string.

```
Applet Viewer: CharStats.class
This program takes a string as input and counts uppercase and
lowercase letters.
Enter a string: Hello, World
That string contains 2 uppercase, 8 lowercase and 2
non-alphabetic characters.
Enter a string: To Be Or Not To Be
That string contains 6 uppercase, 7 lowercase and 5
non-alphabetic characters.
Enter a string:
|
Applet started.
