Introduction to Programming

with Java

Class: RectangleArea.java

Score: ⭐ (Simple)

Prerequisites: ACM Task Force Commands

Description:

Write a program that takes *height* and *width* of the rectangle from the user then calculate and print the area of that rectangle. (Note that *height* and *width* variables should be declared as **double**)

Sample Run:

```
This program computes the area of a rectangle.

Enter the height of rectangle: 4

Enter the width of rectangle: 5

Rectangle Area = 20.0
```
